DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 2 and 5 to 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Forrester, Jr. et al.

Feed rollers 52 and 53 are driven in the reverse direction to tighten the wire for a predetermined time until relay 202 times out. Tension is determined by spring 56 which presses driven roller 52 against drive roller 53. The spring is attached to lever 58, as required by Claim 6. See Figure 4A, column 5, lines 16 to 29 and column 7, lines 45 to 61. The “predetermined rotational number” in Claims 1 and 7 is not considered to distinguish over the predetermined time period set for the motor reversing in Forrester, Jr. et al. since the motor operates at a constant RPM.

3. Claims 1, 3, 4 and 8 to 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Doyle et al.

The binding wire is tensioned by reversing the drive mechanism 364 until friction clutch 360 is overcome. The motor continues operating in reverse until guide jaws 400, 401 are fully opened which, due to the mechanical linkage of the drives, would include a predetermined rotational number. See column 27, lines 20 to 51.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Furlong et al. further shows the state of the art.
